EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Tomoki Tanida on 4/28/2009.

The application has been amended as follows: Please amend Claim 1.

Claim 1 (Currently Amended). A sample hold circuit for sampling an input potential, holding the sampled potential and outputting the same, comprising:

a first switching element, having first and second electrodes, receiving said input potential on the first electrode, and being turned on for a first period;

a second switching element, having third and fourth ~~forth~~ electrodes, connected at the third electrode to the second electrode of said first switching element, and being turned on for a second period;

a first capacitor, having fifth and sixth electrodes, connected at the fifth electrode to the fourth ~~forth~~ electrode of said second switching element, and receiving on the sixth electrode a predetermined potential; and

a drive circuit having an input node connected to the fourth electrode of said second switching element and an output node connected to the second electrode of said first switching element, and providing a potential corresponding to a potential of said input node to the output node wherein a power supply voltage of said drive circuit is intermittently supplied.

DETAILED ACTION

1. Rejoinder Claims : The Examiner agrees with the Applicant for their requests for rejoinder of claims 4-16 and 19-21 directed to the withdrawn species, therefore the restriction for Claims 4-16 and 19-21 are withdrawn. Now Claims 4-16 and 19-21 are rejoinder claims in this application, now there are total Claims 1-16 and 18-21.

Allowable Subject Matter

2. Claims 1-16 and 18-21 are allowed.
3. The following is an examiner's statement of reasons for allowance: The prior arts fails to teach a sample hold circuit for sampling an input potential, holding the sampled potential and outputting the same, comprising: a first switching element receiving said input potential on one of its electrodes, and being turned on for a first period; a second switching element connected at one of its electrodes to the other electrode of said first switching element, and being turned on for a second period; a capacitor connected at one of its electrodes to the other electrode of said second switching element, and receiving on the other electrode a predetermined potential; and a drive circuit having an input node connected to the other electrode of said second switching element and an output node connected to the other electrode of said first switching element, and providing a potential corresponding to a potential of said input node to the output node, wherein said drive circuit includes: a first current limiting element receiving a first power supply potential on one of its electrodes, a first transistor of a first

conductivity type having a first electrode and an input node connected to the other electrode of said first current limiting element, a second transistor of a second conductivity type having a first electrode connected to the second electrode of said first transistor, a second electrode receiving a second power supply potential and an input electrode receiving an potential of said input node, a third transistor of the first conductivity type having a first electrode receiving a third power supply potential, and an input electrode connected to the other electrode of said first current limiting element, and a fourth transistor of the second conductivity type having a first electrode connected to the second electrode of said third transistor, and having a second electrode and an input electrode connected to said output node as claimed in Claim 21.

The prior arts fails to teach a sample hold circuit for sampling an input potential, holding the sampled potential and outputting the same, comprising:
a first switching element, having first and second electrodes, receiving said input potential on the first electrode, and being turned on for a first period;
a second switching element, having third and fourth electrodes, connected at the third electrode to the second electrode of said first switching element, and being turned on for a second period;
a first capacitor, having fifth and sixth electrodes, connected at the fifth electrode to the fourth electrode of said second switching element, and receiving on the sixth electrode a predetermined potential; and

a drive circuit having an input node connected to the fourth electrode of said second switching element and an output node connected to the second electrode of said first switching element, and providing a potential corresponding to a potential of said input node to the output node wherein a power supply voltage of said drive circuit is intermittently supplied as claimed in Claim 1.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
